DELTATRIN 2,5

Registration of the Ministry of the Work, the Health and the Social Policy n. 16265

PYRETHROID INSECTICIDE IN WATERY MICROEMULSION FOR DOMESTIC AND CIVIL USE

Composition

100 grams of product contain:

Deltamethrin

2,5 g (25 g/l)

Co-formulants

q.b. a 100 g

Characteristics

Wide spectrum insecticide, it acts with a low dose of active ingredient per square meter of surface (10-12 mg/cm²) thanks to the presence of pure isomer. This permits to obtain an optimum pest control respecting the environment.

Application field

DELTATRIN 2,5 has a residual long lasting action, it is particularly suitable for the struggle against flies, horseflies, mosquitoes, ants, fleas, ticks, etc. .It is highly effective and easy to use.

Directions and doses of use

Dilute 350 – 500 ml of DELTATRIN 2,5 in 100 litres of water and dispense with a pressure pump using 1 litres of solution every 10 m² of surface.

Knock down dose.

To obtain a immediate result in areas with vegetation, where the insects have rest in the daytime, 500 ml of DELTATRIN 2,5 in 100 litres of water: the atomized solution in the space is sufficient to cover an area of 10.000 m² (a range long 1 km and wide 10 metres).

Packaging: Tank of 5 litres

COD 1-4-600-5
